THE WORLD OVER

FIRE IN PRINCE WALES' HOUSE

U.S. CAN BUY 75,000,000 BUS. GRAIN

BALLOON ASCENT 18 7,000 FEET

RECIPROCIITY WITH THE STATES

LONDON—The explosion of a parachute lamp in the servant's quarters of St. James Palace, residence of the Prince of Wales, caused a general fire alarm, and much excitement early on Monday night, but the blaze was extinguished with minor damage to the palace.

Flames were spreading through the servant's quarters and the mess room of officers of the guard when the firemen arrived, but they quickly brought the fire under control. Wedding gifts of the Duke and Duchess of Gloucester are on display at the palace, adding to the interest in the fire.

TORONTO—Thomas D. Campbell, noted wheat authority of Hardin, Mont., said in an interview this week there is an immediate market in the United States for at least 75,000,000 bushels of Canadian wheat and the Canadian government controls practically the entire world wheat supply.

"Canada is today sitting in the driver's seat as far as wheat is concerned," said the Montanan, who is the U.S.'s largest individual producer of wheat and flour.

WHITE LAKE, B.C.—A gentle landing by the world's largest balloon in a field here late on Monday evening fully ended Man's most far-reaching venture into the heights of the stratosphere—to an unofficially recorded altitude of 14 miles.

Two United States army fliers, Captain Albert W. Stevens and Orvil Anderson—if later calculations of 7,000 feet as the zenith of their soaring—by the daring venture captured the world altitude record and brought back valuable additions to science's knowledge of the super-atmosphere.

OTTAWA—A political dream that has hovered before the eyes of Canadians for 59 years seemed a reality on Monday. Since 1866 one government after another has made overtures to Washington for a reciprocity treaty and on Monday Premier King announced he had been successful.

Canadian-American reciprocity negotiations go back to 1848, long before Confederation, when William Hamilton Merritt, of St. Catharines, Ont., piloted a bill through the Canadian house offering reciprocal free trade in natural products.

An agreement lately was signed in 1854 known as the Rye treaty and the treaty which was floated through on champagne. It ushered in a decade of prosperity with the United States and conditions booming. But it ended in 1866 when the American government terminated the treaty, one reason being

CARBON, ALBERTA, THURSDAY, NOVEMBER 14, 1935

\$2.00 A YEAR; 5c A COPY

OLD TIMERS TO CELEBRATE ON NOVEMBER 22ND

The Carbon Old Timers Association will hold their annual banquet and dance in the Pioneer Exchange hall on Friday evening, November 22nd, the banquet to start at 7:30 p.m.

"All persons who have been in Alberta prior to December 31, 1909, and are now living, or have lived in the Carbon district are eligible and welcome to take in and enjoy this annual barbeque and now war. Also children of old timers who are 15 years of age or over."

The "Chuck Wagner" old time orchestra from Powder River will furnish the music for the dance, and from all indications they will provide top snappy music, and as Charlie Nash says they will "brand" their music on your memories.

Miss E. Watson of Calgary will give a demonstration of Scottish dance, accompanied by Murdoch McDonald, also of Calgary, with the bag pipes. These entertainers promise some real old Scottish tunes and dances.

And to crown the event, the admission to the info. banquet, dance and midnight lunch will be only \$1.00 per person.

What a feast! What a dance! For only one dollar.

UNITED STATES WHEAT PURCHASES

The demand for Canadian wheat in the United States is a bright spot in the wheat picture. Over 10,000,000 bushels of Canadian wheat has crossed the line from August 1st to date and it is obvious that high grade wheat supplies are rapidly diminishing in the United States which leads to the supposition that importations from Canada will continue on a comparatively extensive scale.

A considerable percentage of the wheat going into the United States is destined to be milled and the flour made therefrom will be exported, but the bulk of the wheat is for domestic consumption there. The suggestion made earlier in the year that the United States would likely take 50,000,000 bushels of Canadian wheat is likely to be realized unless steps are taken by the United States government to curtail the flow.

ing the attitude of Great Britain during the Civil War.

From that day to this, succeeding Canadian governments have sought unsuccessfully to interest the United States in resurrecting the treaty.

Suez Canal is Owned By Private European Interests

The Suez Canal is a channel of water about 100 paces wide and 100 m. long. Compared with other bodies of water it is insignificant, but strategically it holds a grip in world commerce. It is owned by a private company with head office in Paris and the decision to open or shut the canal frequently rests with Marquis de Vogher, financier and industrialist.

In 1869 a French vessel with Empress Eugenie aboard made the first voyage, followed by 48 vessels of all nations. It was a ceremonial occasion, and the opera "Aida" composed for the occasion formed a part of the ceremonial program.

Britain had opposed this French-Egyptian project, fearing her route to India might be interfered with. But fifteen years later the Khedive of Egypt went broke, and tried to sell his holdings in the Suez Canal. France refused to buy, and the British government made the purchase for £20,000,000, which obtained 44 per cent of the shares.

Today, there are thirty-two members of the Universal Society of the Suez Canal. One is Dutch, 19 are English and 21 are French. Lord Cromer is a British spokesman.

The canal has been closed twice in 1912 and in 1914 it was closed to the Spanish fleet during the Spanish-American war.

In 1904, the British made final agreement that the canal would be invariably neutral, and this permitted the Russians to use it in the Russo-Japanese war.

But the Suez Canal is a private toll road, and the owners might decide to close it to their own account. In 1931 it cost \$22,000,000 with expenses of about \$22,000,000, so it is a good investment. The directors get an annual fee of about \$22,000.

Both DeWendel and Schneider groups are represented on the board, and the majority of directors are financiers, industrialists and politicians. Nations may solemnly swear that the canal shall always remain open. But actually there is very little to say about it—Calgary Alberta.

To prevent scratching of polishes, cement cork linings from oil bottle caps as taxi, truck, deer, flower pots, etc.

PAN TO TEST QUALITY OF ALBERTA'S GASOLINE TAX

Motorists in all parts of Alberta will watch with special interest the results of the local action initiated at Edmonton by C.H. Grant, K.C., to challenge the validity of the gasoline tax in this province.

Definite notice of intention to test the act has been given and it is expected that proceedings will commence soon. Grant is acting on behalf of a private citizen.

When the provincial government raised the tax from six to seven cents per gallon last April there were threats that validity of the legislation might be challenged but no definite action was taken. Nevertheless, there was a feeling that within the year the government's right to impose the levy might reach the courts, and this has proved to be the case.

A vigorous fight against the government's practice of raising this tax is being specifically "sponsored" by the revenue for road construction and maintenance purposes has been waged for years by the Alberta Motor Association. That body has warned the government that there comes a time when such levies only result in less returns than would be the case under a lower tax, while also serving to encourage the activities of the gasoline "bootlegger."

Respecting to take around \$20,000,000 a year out of the motor driving public in this way, the government naturally would be in a serious predicament if there proved that the gasoline tax was illegal.

Rubber fruit jar rings cemented to the bottom ends of small cans will prevent rags slipping.

FARMERS' EXCHANGE SALE GOING OVER WITH A BANG

Saturday was the opening day of the Farmers' Exchange 18th Anniversary sale and junkies from the crowd that flocked to the store all day, many bargains were being offered and obtained.

The sale continues and while many from the country have not been able to get in, there are still hundreds of bargains left for thrifty shoppers.

Get one of the large posters and you will have an idea of the bargains that are available at this anniversary sale.

BUSSES RUNNING ON SCHEDULE

While bad roads held up bus and carriage operators to some extent last week, roads are again open to the main centers and all vehicles are running pretty well on schedule again.

Cold weather and poor travelling conditions have increased bus traffic considerably, and with heated buses the lines have much to offer in the way of comfort and ease of mind over the regular motor car conference.

CANADIAN APPETITES

The average Canadian eats 68 lbs. of meat in one year, besides 64 1/2 pounds of poultry. At least these were the consumption figures for 1934. In that year Canadians increased their per capita meat consumption by 12 pounds, and decreased per capita pork consumption by 8 pounds. The switch was due to the increased price of pork and comparatively lower price of beef.

The average Canadian in 1931 consumed 31 pounds of butter and 29 1/2 pounds of lard, and 2 1/2 pounds of cheese.

WHY THEY WANT RELIEF

Relief officers have their troubles and not the least is trying to figure out what some of the applicants really mean when they write in to relate their troubles. A letter states that the following is an actual list of remarks received in one office in the United States:

1. I cannot get sick pay. I have six children, can you tell me why it is?
2. This is my eighth child. You are going to do about it?
3. Mrs. Brown has no clothing for a year and has been regularly visited by the clergy.
4. I am glad to say that my husband who has been reported missing, is now deceased.
5. Since I am forwarding my marriage certificate and my two children, one of which is a mistake, you can see.
6. I am writing to say that my baby was born two years old. When do I get my money?
7. Unless I get my husband's money soon I will be forced to lead an immoral life.
8. I am sending my marriage certificate and my six children. I have seven, one died which was baptised on a sheet of paper by Rev. Thomas.
9. Please find out for certain if my husband is dead. The man I am living with now won't eat anything nor do anything well by himself.
10. I am very anxious to find that you have branded my oldest boy as an illegitimate. This is a dirty lie as I am married to his father.
11. In answer to your letter I have given birth to a boy weighing ten pounds. I hope this is entirely satisfactory.
12. Please note, you have changed my little boy to a girl. Will it make any difference.
13. I have no children yet. My husband is a bus driver, and meets the night train.
14. In accordance with your instructions you will find that I have twins in the enclosed envelope.
15. I want my money as quick as you can send it. I have been in bed with the doctor for two weeks, and he don't seem to be doing much good. I may have to send for another doctor.

ROADS OPENING UP AGAIN

With cold weather and a little more traffic, roads in the vicinity of Carbon are opening up for motor traffic.

The new grade through Carbon connecting the west and south main highways is open and considerable coal is being hauled by truck from the local mines, which are working to capacity these days to keep up with coal orders.

One good thing about a cold fall—it may make a long winter, but the miners in the valley benefit considerably with the extra work with the result that local businesses benefit to some extent.

VILLAGE TO HOLD TAX SALE FRIDAY, NOVEMBER 29TH

An advertisement appears in this issue to the effect that under the Tax Recovery Act, the Village of Carbon will hold a tax sale of all delinquent tax payers' property on Friday, November 29th.

There are a number of fine village properties on the auction block, some with buildings included, and all sales will be subject to reserve bid.

Terms are cash and the sale starts at 2 p.m. to be held at Alex Reid's office.

Property is again advancing in price and many good bargains will be offered, a list of which can be obtained from the secretary treasurer.

ETHIOPIANS WIN SKIRMISHES

Officials on Tuesday night confirmed London dispatches to the effect that a conference will be held in Ottawa next week in connection with the Imperial Airways proposed for a transatlantic air service. Representatives of the British, Irish Free State, Northern Ireland, and Newfoundland governments will confer with Canadian officials.

Three Ethiopian victories in skirmishes with Italian troops were reported in Addis Ababa Tuesday.

An official announcement said the invaders were defeated at Anke, Oromia province, during intense fighting, with losses heavy on both sides. Four tanks were captured. In another clash in the same district, Italian soldiers and six Italian soldiers were killed. A communique also said that Commander Gabre Harey dispersed an Italian force in the north, with a number of casualties.

Of all the people in the world today, not more than one-third eat with a knife and fork. Another third use cutlery and the final third still eat with their fingers.

I.O.D.E. ANNUAL DANCE DRAWS LARGE CROWD

In spite of the fact that the orchestra engaged for the evening did not arrive from Trumbuller, the I.O.D.E. annual dance held on Monday night turned out to be a gala affair with "success" written well across the entertainment.

Real snappy music was furnished by Miss Leona Gervais, Dick Gishel and Corrie Pisonen, with other talented.

Streamers, paper hats, noise makers, etc., combined with a prettily decorated hall and a dancing crowd, gave added punch to the dance.

During the supper hour the drawing for the hope chest, comforter and handkerchiefs picture book, place and Civil Poonen was the lucky winner of the chest, while Mrs. H. Wilson won the comforter and F. Martin, of Bentley, the picture book.

The I.O.D.E. wish to extend their appreciation to the crowd and orchestra for their co-operation on this occasion.

OCEAN AIR SERVICE TO BE SUBJECT AT OTTAWA PARLEY

Officials on Tuesday night confirmed London dispatches to the effect that a conference will be held in Ottawa next week in connection with the Imperial Airways proposed for a transatlantic air service. Representatives of the British, Irish Free State, Northern Ireland, and Newfoundland governments will confer with Canadian officials.

Regular Aeroplane Service Across the Atlantic Appears To Be Nearing Realization

Prediction by Dr. Alexander Graham Bell shortly after the Wright brothers made their memorable first heavier-than-air machine flight at Kitty Hawk, North Carolina, that a regular aeroplane service across the Atlantic would be operated during the present generation appears to be nearing realization.

And a more important reason for the prophecy, as far as Cape Breton is concerned, is that plans for the ocean service may call for a landing field at Sydney.

It is believed that Sydney is greatly favoured as the terminus on the Atlantic seaboard.

Word from Montreal is to the effect that work is being rushed across Canada for completion of the continental airway so that European passengers and mail would be less than three and a half days away from the St. Lawrence city port year and less than five days from Vancouver.

Single unemployed men are constructing 14 landing fields around the Dominion at approximately 25-mile distances as part of a gigantic unemployment relief program.

Should the transatlantic service be developed, it is believed that a network would be the main eastern terminal, with aeroplanes connecting there with western routes. The first stop would probably be at Halifax, Fredericton, Moncton and Saint John.

The Canadian airway will go from Montreal to Elmville, where a radio beacon is being operated will be the jumping point for aeroplanes from Toronto and southern Ontario. Radio beacons are also planned for points near Cobalt, Kapuskasing, Thunder Bay, all in the northern Ontario, Winnipeg, Brandon, Regina, Piquet and Lethbridge will have beacons, and a feeder line will connect with the Arctic air mail routes from Lethbridge.

Approximately 12,000 men have been employed on the airway construction plan. They are housed in camps and receive regular army rations.

Sydney's city council appointed Mayor S. E. Muggah and City Solicitor Finlay MacDonald as a committee to gather all available data relative to a transatlantic base being established here.

One of the top advantages Sydney has to offer is that it is the only place on the Atlantic coast, with sufficient landing space that is relatively free from fog for the year round.

Aged Farmer A Knight

Has Made Numerous Priceless Gifts To Historical Museums

A farmer-knight has been found in Stockholm. For a long lifetime of devotion to the study of Swedish antiquities, a Swedish nobleman, Knut Christoffersson, has been created a Knight of the Royal Order of Vasa. Mr. Christoffersson, now 70 years old, still recalls studying his archaeological book as a boy. Treasured specimens, found in the fields of his Province of Scania, were often thrown away as rubbish by his mother in those days. Since then, from his farmhouse collection he has made numerous priceless gifts to the historical museums in Stockholm, Lund, and Treleborg, and has gained fame among archaeologists of Sweden for his unusual knowledge of Scania's ancient history.

Bird Males A Get Away

It's not a fish story that Dr. W. C. Cannel, of Stratford, Ont., tells about the one that got away. It's a bird story. He had been shooting pheasants, he said, and had been carrying two in a bag for about two hours when he heard a whirr—none made hasty exit from the bag and flew away.

Average farm values per head of sheep, swine and poultry in 1934 increased over those of 1933, cattle alone showing slightly lower values. Hens cost decreased in value from \$13 to \$9 per dozen, while cattle increased from \$14 to \$14.18; sheep increased from \$4.50 to \$4.80; and swine from \$6.50 to \$6.80; and poultry from 56 cents to 59 cents per head.

"Jack," said the plumber's wife as he was leaving home at 10 o'clock, "bring me a jar of cold cream from the drug store when you come back for the tools you're forgetting."

After hen eggs have been incubated four days in China, they are examined and the infertile ones are sent to market.

OLYMPIC GAMES STILL CONTROVERSY

Principals in the vociferous verbal battle over the United States entry in the 1936 Olympic games at Berlin are Jeremiah T. Mahoney, right, of New York, president of the American Athletic Union, and Dr. Theodore Lewald, left, president of the German Olympic committee. Dr. Lewald declared "there is no question of religion in German sports." In reply to Mahoney's charge that Lewald was being used "as a smoke screen to conceal the German Government's most flagrant violations of Olympic ideals for fair play to all."

Comical Competition

Whisker Derby And \$100 Prize Helps To Promote Beards

After 20 days of hair-raising competition, Andrew Duncan was named winner of Drumheller's "whisker" derby and a \$100 prize. His fertile face produced the best yield in a field of 27. David Jones was second-losser by a close shave.

The contest, run by the Drumheller Miners Hockey Club, brought out hirsute hopefuls with everything from neat Van Dyke effects to uncontrolled combing bidding for victory on quantity.

Disappointment of entrants who achieved only a dirty face effect was relieved by consolation prizes.

The present consumption of beef in Canada per head of population is estimated at 66.69 pounds (50.08 in 1933); pork, 66.36 pounds (47.58 in 1933); mutton and lamb, 6.28 pounds (5.32 in 1933); poultry, 5.0 pounds; butter, 30.92 pounds; cheese, 3.64 pounds; eggs, 23.31 dozen per capita.

When John Bull has his say, all the other powers listen intently.

The SNAPSHOT GALLERY

LET'S GO HUNTING

It's the wise hunter who keeps his camera loaded and ready to snap the real story-telling pictures such as this one.

Don't those cool, crisp fall mornings sort of give you the hunting fever? In spite of all the pleasure you had during the good old summer time you probably look upon the bright lights of the year, and as you sit, you're a good evening smile. It's a lot of pleasure to talk over the happenings of the day?

There should be more to a hunting trip, however, than tracking your quarry and enjoying the moment when the antlers of a fine buck make their appearance through the trees; or that you're making a wild dash into the clearing and you put up a valiant fight against a severe attack of "buck fever."

The appearance of your game and the exciting moment when you quickly make your gun to the mark, "shoot" and the picture is yours. It is then that you should do a moment's reflection. "Shooting" with a camera should not be overlooked for it is with snapshots that you can make a picture record of your trip and enjoy your expedition over and over for years to come.

Your snapshots can picture your trip. You can make them as you hunt. Just load your camera with film, and you can make a picture record of your trip and enjoy your expedition over and over for years to come.

There are, however, many moments of relaxation and leisure, too. It is then that you should do a moment's reflection. "Shooting" with a camera should not be overlooked for it is with snapshots that you can make a picture record of your trip and enjoy your expedition over and over for years to come.

Protein Content Of This Season's Wheat Crop Is Shown To Be Higher

Friendship Chain Letters

Rural Districts Have New Way Of Greeting Patches For Quits

Quitting here has become a popular during the depression days of Saskatchewan—housewives saved all the pieces of cloth available and made quilts instead of buying them from the stores. Clubs and societies held their bees and made dozens of quilts for institutions such as the orphanages, Indian schools, etc.

Now, however, there will be added zest in the popular pastime for it has come under the eye of some shrewd print manufacturers, who have seen that people who have received what is the letter in chain letters. Yet the chain letter has gone right into quilting and it is captioned "The World's Friendship Quilt."

The letter runs on the same principle as all former chain letters, but there is no money to be sent. The receiver of the letter is asked to carry on the chain until her name appears at the top of the list, and at that time she will have 250 samples of print, that can be made into "beautiful and elaborate quilts."

Several organizations have already taken up the idea. In the north and throughout the rural districts of the province, women are getting their letters daily—Regina Leader-Post.

Seed Wheat

Advice Concerning Use Of Rusted Wheat For Seeding Purposes

On account of the wheat rust epidemic in the prairie provinces many farmers will be obliged to use wheat seedlings which have been more or less injured by this disease. Many badly rusted samples have already been sent to the laboratories of the Seed Branch, Dominion Department of Agriculture at Winnipeg, Saskatoon and Calgary. Germination tests show that even very poor, shriveled kernels are capable of producing seedlings, but these seedlings are weak and spindly. It should be remembered that germination conditions in the laboratory are practically ideal, and that even many of the weak seedlings will not survive in the field particularly if soil moisture and temperature conditions are not favourable at the time of seeding.

Owing to the size of the rusted kernels there are very many more than in normal plump seed wheat. This means that in spite of injury rusted seed will give a good stand. However, the seedlings will be weak and subject to the attack of root rots and similar diseases. Badly rusted seed should not be used for sowing. For the control of rusts and other diseases of wheat, instead of copper carbonate or one of the dusting materials recommended by the experts.

Rusted cereals should be well cleaned so that the heavier kernels are used for seeding.

First Metal Used By Man

Has Many Important And Valuable Uses In Industry

Copper is really worth its weight in gold because of its many important and valuable uses in industry. As a result of its great powers of resisting corrosion copper is frequently found in its "native" state, and was, therefore, probably the first metal to be used by man. Traces of copper, working, dating back possibly as far as 6,000 B.C., have been found in Egypt, and the evidence suggests that the art of metallurgy probably originated in the valleys of the Tigris and Euphrates. It is to be the site of the earliest civilization. Copper objects have been discovered at Mesopotamia, below the level of the clay deposit left behind by the Great Flood, which is believed to have occurred about 4,000 B.C.

It is probable that the first smelting of copper originated from this discovery of beads of metal which had been used for primitive camp fires. No doubt this process, developed by accident, was soon discovered deliberately, as there is evidence that the early metal workers constructed their furnaces on the windward side of hills, with a trench to catch the wind, in order to get a good draft. To-day about half the copper produced is used in the electrical industry and about one-fifth in ship-building.

Special Whisky Tips

Ships Travel Through Cape Horn To Flavour Liquor

Whisky specially matured by a voyage through the Cape Horn will soon be on sale in London. Shippers at Melbourne have just exported a consignment of eight casks of whisky, the result of a voyage to England it must be carried round the famous storm-beaten Cape Horn. The severe shaking the ship will probably receive as the ship ploughs through winter seas off the coast of South America is expected to give it a rare flavor. Port wine is sometimes taken on similar long voyages. The constant heaving of the ship and the motion of the wine inside the casks imparts to it an extra bouquet.

The year 1931 was an exceptionally healthy one in the United States and Canada, according to life insurance records, which show the lowest death rate on record for that year.

Man—"How long have you been married?"

Friend—"Let's see—I bought this overcoat I'm wearing six years ago."

"A man with black eyes has been seen," says a writer. We doubt it. But the man who has been seen has other fellow's straight left coming.

Operating On Building

Cut Five Feet From Middle Then Join And Heave

Instead of slicing five feet off the Olive Street front of the Commercial Exchange at the corner of Eighth Street, Los Angeles, Calif., to allow for the widening of the street, engineers have decided to cut a strip across the middle of the building and then roll the skyscraper back into its original position.

The building is thirteen stories and the highest structure of the city. According to George B. Kress, of the Kress Housing Moving Company, the engineers will do this. He estimates that he will have to slide more than 5,000 tons of steel, brick and cement—thirteen tiers of offices and stores—five feet without disturbing street traffic or the tenantry of the building. It is perhaps one of the most delicate engineering jobs which has been undertaken in this country in many years.

When the city authorities of Los Angeles sent out orders that Olive Street was to be widened the owners of the Commercial Exchange called in the engineers and went into the question of what should be done. They were told that the simplest solution of the problem would be to slice the five feet off the Olive Street front of the thirteen-story structure and then construct a new facade, but that would cost considerable money. It would be cheaper, it was pointed out, although more troublesome, to move the building back into its original position.

'QUAKE TREMORS CAUSE DAMAGE IN EASTERN CANADA

Toronto.—An earthquake shook Canada with a rumbling shock from the heart of the Great Lakes to the Bay of Fundy. Buildings were shaken, dishes knocked from tables and thousands of persons frightened so badly they rushed into the streets during the tremor that lasted from 15 seconds in some areas to a minute or more in others.

Damage was almost negligible in Canada, but a house caved in at Syracuse, N.Y., and street signs fell to the street in Pittsburgh, N.Y.

Two seismograph instruments at the Dominion observatory in Ottawa were broken by the 'quake's severity.

Telephone communication in central Ottawa was disconnected for a time after the shocks fell about 1.05.

Frank O'Donnell, of the Dominion meteorological bureau at Toronto said the tremors were the worst ever felt there.

"What was a very severe 'quake somewhere," he said, adding that just north of the St. Lawrence river there was a fault in the earth.

There were two distinct shocks in the east. The first lasted 40 seconds in some places and was followed by a brief, less pronounced tremor.

Toronto, Montreal, Saint John, N.B., Detroit, Cleveland, Washington, Boston, Albany and Montreal.

West Virginia, all reported that buildings were swayed by the tremor. Telephone lines were out in a number of centres in upper New York state.

The 'quake lasted about five seconds in Toronto, vibrating 'pictures to shimmies. At Montreal it was of sufficient strength to move furniture.

Widespread damage was done in Kingston, where brick walls in several buildings cracked. Reports from Windsor indicated the shock there was slight.

It was believed the centre of the shock was in the United States, probably in New York state.

Frightened citizens deluged the newspaper offices with calls. In nearly every part of eastern Canada the 'quake was strong enough to awaken the slumbering.

Despite slippery streets in Toronto, the most violent 'quake felt there in eight years failed to cause any traffic accidents.

Doctor Was Lucky

Wins Sweepstakes Prize, But Will Continue With His Practice

Toronto.—A good fortune which came to Dr. Herbert H. H. Douglas, holding an Irish hospital sweepstakes ticket on Finland, third in the Cambridge sweepstakes in Newmarket, England, will not change the doctor's plan, he said. The ticket, half of which he had sold, was worth about \$49,100. "My job is taking care of sick people," he said, adding that now he had "a little money" but he did not have to press his poorer patients for payment.

New Assembly Plant

Initial Yearly Capacity Of From 40,000 To 50,000 Cars

Detroit.—Plans for the construction of a \$2,500,000 automobile assembly plant in Los Angeles, which will be ready for operation about April 1, 1936, have been announced by the General Motors Corporation.

The corporation announcement said the plant would be set up for the assembly of Pontiac, Oldsmobile and Buick motor cars with initial capacity of from 40,000 to 50,000 cars a year.

Ask For New Tax Deal

Edmonton.—Proposed conference between the provincial government and Alberta cities, at which the latter will ask for a new deal in taxation and responsibility for social services, will have to stand over until the provincial-federal conference at Ottawa, Premier Aberhart told Mayor Clark.

Government in Newfoundland

St. John's, Nfld.—Abolition of the present commission government in Newfoundland and restoration of the island's constitution was advocated in a public meeting called by members of a new organization, "The Crusader."

Bank Deposits Dip

Ottawa.—The weekly statement of the Bank of Canada for the week ending Oct. 30 showed an increase of \$2,485 in Dominion government deposits, while deposits by chartered banks were up \$3,647,694.

Says Italy The Aggressor

Co-Author Of Kellogg-Briand Pact

Denounces War Policy

St. Paul, Minn.—Frank Kellogg, co-author of the Kellogg-Briand pact declared that the "United States in common with other countries can and should designate Italy as the aggressor in its flagrant violation of the pact."

He added the United States should "denounce Italy's violation of its treaty obligations and announce that it will take no step to interfere with or nullify the measures that, other nations are now taking to put a stop to this war."

"What some of the American people seem to have forgotten and what the Italian people or their government seem to have entirely ignored," Kellogg said, "is that when Italy invaded Ethiopia and thus beyond a shadow of doubt proceeded to use war as an instrument of national policy, Italy violated a treaty with the United States."

He referred to the Kellogg-Briand pact. Kellogg expressed the hope that this war would be the last with Italy. "It will have it borne home to them constantly that it is their duty to make sure that Italy is not adding and abetting a nation that is treating a solemn treaty as a scrap of paper."

Test Validity Of Laws

Social Legislature To Be Submitted To Supreme Court

Ottawa.—Social legislation passed at the last session of parliament will be submitted to the supreme court of Canada for a decision as to its validity.

Mr. Mackenzie King stated recently. An effort will be made to have the court's decision on these matters ready for presentation to the Dominion-provincial conference which Mr. King hopes to have late in November.

Mr. King did not give any detail as to the particular statutes to be tested, but he said that it is assumed they will include those dealing with the minimum wage, minimum hours of labor, one day of rest in seven and the unemployment insurance act, most of which, while supported by the opposition were challenged by them on constitutional grounds.

Social Credit Plan

Aberhart Will Not Call Major Douglas Before Next Spring

Edmonton.—Major C. H. Douglas, reconstruction adviser to the provincial government, will make a second visit to Alberta this year, Premier Aberhart announced. He expects the visit will be possible in the next two years.

Mr. Douglas has been invited to prepare a Social Credit plan for the province.

The plan would be submitted to the Reid government which Major Douglas provided for a fee of \$25,000 and expenses during each visit to the province not exceeding three weeks' duration, the province will be saved that additional amount if the economist does not return this year.

He was last here during May of this year. Besides his \$2,000 special fee for each visit, Major Douglas has a \$3,000 general contract, one-half of which has been paid.

Wins Judging Prize

Miss Swift, Of Viking, Captures First Place In Contest

Edmonton.—Capturing first place in the judging of sheep, Miss Alice Swift, Viking, was awarded a special prize for the highest number of points in the junior judging classes at the Edmonton exhibition annual fall swine and sheep show.

Miss Swift also won the lamb trimming contest in competition with all others.

Benefit From Snow Storm

Saskatoon.—Great benefit to western land was seen by Dean A. W. M. of the college of agriculture, University of Saskatchewan, as a result of the 63-hour snow storm that swept Alberta and Saskatchewan.

The unfrozen ground will absorb the moisture if the snow thaws. If the white blanket remains it may keep the frost out of the ground, he said. The university recorded 130 inches of moisture as snow melted during the last 48 hours.

Naval Building Program

London.—The admiralty announced the construction of eight destroyers and a flotilla leader in the 1935-36 naval building program.

World Wheat Supply

U.S. Bureau Of Agriculture Says

Stocks Much Lower

Washington.—A decrease of 240,000,000 bushels from the 1934-35 season in world supplies of wheat, excluding Russia and China, was reported by the U.S. bureau of agriculture.

The present world supply was reported to be 4,360,000,000 bushels, 500,000,000 bushels less than the average from 1928 to 1932.

The reduction was due to the fact that wheat has been reduced from smaller stocks in all major producing countries except Canada.

Woman Senator Injured

Senator Falls In Hospital With Broken Wrist

Ottawa.—Senator W. J. Falls of Peterborough, Ont., second woman member of Canada's upper chamber, has been in hospital since Oct. 15, suffering from a broken wrist and a foot injury.

Dr. Stanley P. Briven, her physician, said she was not seriously hurt, but she had broken one joint in her wrist and a bone in her right foot. He said she slipped off the curb and fell.

Performs Before Royalty

Eclectic Dancing Of U.S. Canadian

Pleases King And Queen

London.—The eclectic dancing of Will Mahoney, United States comedian, entertained the King and queen and the rest of the audience at a royal command performance in the Palladium.

Majesties laughed heartily all through the act and applauded as the American took a number of curtain calls. Mahoney topped his success by playing the xylophone with his feet.

The King looked remarkably well, when Mary wore a pale green gown ornamented with large paillettes, a cloak of pale green satin and a diamond tiara with a magnificent emerald in the centre.

Floods In Honduras

115 Lives Lost And Great Property Damage

Tegucigalpa, Honduras.—Floods sweeping Honduras have taken an unknown death toll of 115 lives and unofficial estimates of the damage reached more than \$120,000.

Hundreds of Americans live in the flooded area, but none was known to have drowned.

The swollen streams spread far beyond their banks in what officials believed to be the worst flood in the history of Honduras, the towns of Maricao and San Pedro Jula reported strong earth shocks were felt.

Losses were estimated at more than \$750,000.

Quebec Flections

Voting To Take Place On November 21st

Quebec.—Quebec's 18th legislative assembly was dissolved and Nov. 21 was set for the provincial elections. Premier Taschereau made the announcement following a cabinet meeting.

The general elections in Quebec were held Aug. 24, 1931, and Premier Taschereau might have waited until next year, if he so desired, before holding another.

Premier Taschereau has headed the government since 1920 when he took the Liberal leadership following the retirement of Sir Louis Gouin. The Liberal party has been in power since 1897.

Heavy Death Toll In Explosion In China

Lanchow, China.—The death toll from the arsenal explosion on Oct. 28 approximated 5,000 as laborers pushed ahead in their work of clearing up debris.

Most of the bodies were found beneath the wreckage of houses demolished by the terrific blast. Many persons were apparently buried alive in the ruins.

THE MAN BEHIND THE SEAS

Airliner Lands At Nelson

Lost U.S. Plane Makes Safe Landing In B.C. Town

Nelson, B.C.—A Northwestern Airlines passenger plane, out of Helena, Mont., which made its last call at Billings, Mont., and then started for Spokane, made a forced landing in a rocky field on the outskirts of Nelson. Three pilots and four passengers escaped unhurt.

The giant airliner first appeared over Nelson and circled the city at a low altitude and then headed westward. It was reported later over Tagham, five miles west of Nelson, where it circled about and then continued over Trail where it was sighted.

Returning to Nelson the machine with lights ablaze circled the city and grazed mountains as it picked out a suitable landing place.

Dropping lower the pilot picked out a spot near the golf links and panicked into a rocky field. When the plane landed it hit a tree and a pole of a heavy wooden fence and the body rested on a stone pile.

Passengers reported the plane hit the radio tower just east of Helena in a snow storm. They drifted about attempting to pick it up without success. A Northwestern Airlines pilot and plane and they lost their bearings completely.

Alberta Liquor Prices

Increases Are Announced To Go Into Effect At Once

Edmonton.—With increases up to 25 cents on a 25-cent bottle of Scotch, 20 cents on a similar bottle of 20, 20 cents on imported gin, 10 cents on Canadian gin, 25 cents on the more costly liquors and five cents on a dozen pints of beer, new prices for Alberta vendors' stores will go into effect, it was announced.

The new list includes the list in red ink "Prices quoted in this list include an assessment for relief purposes."

The new list, however, shows steep reductions in the price of brandy imported in the bottle. One brand dropped from \$4.00 for a 20-ounce bottle to \$3.00. Another brand shows a reduction from \$5.50 to \$5.10.

Increases in the price of wines run from five to 10 cents a bottle.

The increases go into effect following an announcement by Premier Aberhart that he hoped to raise \$300,000 by this method.

Italy May Arm Merchant Ships If Necessary

Rome.—Premier Mussolini, in two emergency, war-like decrees, drafted Italy's womanhood to fight league sanctions and ordered a census of the merchant marine to determine the strength of the naval reserve.

Italy's merchant ships will be required to carry out the decrees. In well-informed circles belief was expressed that by this step II Duce intended to groom his sea-power in the event of a possible war in Europe.

All shipowners and captains were told to be ready to give information about their vessels to a naval committee from the navy, war and communications departments.

Those ships designed as naval auxiliaries will "carry defensive arms" in case of war, the decree stipulated.

The decree directed the command of the entire merchant marine between the departments. The navy minister was in absolute command of armed auxiliaries and the communications department may command "traffic ships" until further orders are received by the navy.

To the women II Duce entrusted the feeding of their families and home-grown food, making efforts from sanctimonious utterances unnecessary. War mothers and widows were chosen to direct the "house by house" organization. By this II Duce wanted the allied countries of the great war to realize their sanctions are striking at the families who fought for them.

An official spokesman, at the same time, called sanctions an "inhuman" attack on Italy's civil population. "Our army will not be seriously affected," he said.

The national army of women will be directed by II Duce himself, through the Fascist party. An official announcement called it a "house by house organization of defence repels."

Although they were not specified, were understood to be a refusal to surrender from "enemy" sanctions.

Relief And Unemployment

Ottawa.—The new government's policy with regard to unemployment relief came into effect last week, announced within a few days. Defence Minister Mackenzie said the whole of the government's policy was to be known after examination of all phases of the unemployment situation.

Hon. Vincent Massey Has Been Appointed To London Post

Ottawa.—Hon. Vincent Massey, who was Canadian high commissioner in London for a brief period in 1926, has again been appointed to that post, Prime Minister Mackenzie announced. Mr. Massey's appointment will date from Nov. 8, the government having accepted the resignation of Mr. Howard Ferguson, present high commissioner, as effective on that date.

The prime minister had already indicated he would send Mr. Massey to the London office. Mr. Ferguson's resignation was probably made a few days ago, but after an exchange of communications with Mr. King, agreed to carry out his post until it would be convenient for the government to relieve him.

Breeding Field Corn At Brandon

Experiments Carried On For Over Fifteen Years

At the Dominion Experimental Farm, Brandon, Manitoba, corn breeding studies have been in progress for over fifteen years. At first all attention was given to earliness. By continually selecting ears from early maturing plants, a very early strain was produced. However, this strain possessed several undesirable features. It was too much of the dwarf type and produced too many suckers, and the ears were borne too low on the stalk. Improvement of the strain is being accomplished through two avenues, line crossing and a modified ear-to-row system. In the former, lines are established by inbreeding or self-pollination for at least four or five generations. There inbred lines are usually much less vigorous than open-pollinated plants yet they are valuable in fixing or establishing certain desirable characters. When inbred lines are crossed, the progeny in many cases is more vigorous than open-pollinated plants and gives greater yields both in earliness and seed.

The ear-to-row system is a mass breeding proposition in which the rows from ears making the best showing in previous tests are used as main parents. All ears have the tassels removed as soon as they appear, so that all pollination is by the few selected male rows. In 1932, ears were gathered from twelve hundred selected plants. Progeny tests have been made each year since and inferior lines eliminated. In 1933, this test only seventy remain and of these the best twenty-seven are used as male parents.

Marked improvements have been made in respect to height of plants, suckering and height of ear. Concerning the latter, there are now well up on the stalk, few being less than twenty-five inches from the ground. To gain extra height of plant, it has been necessary to sacrifice a few days in earliness, nevertheless most of the best lines are still sufficiently early to mature under average conditions at Brandon.

Personality Operation

Removal Of Part Of Gland Cures Many Difficulties

A new personality operation, which cures things like bearded ladies and cures for husbands was described for the American college of surgeons recently on the eve of its annual convention at San Francisco.

The operation removes a little of the adrenal gland, the structure which supplies the extra energy for anger and for fighting. This gland lies near the kidneys and secretes anything directly to do with sex, yet strangely is the cause of upsets in masculine and feminine personality traits.

It is one of the endocrine, or ductless glands, which work in series like electric lights on a main line. The researches which led to discovery of the operation for personality were described by Frank Hannon, M.D., of the University of California Medical school.

He said studies of the endocrine disclosed some of the puzzling intermixtures were due to the one section of the adrenal gland, called the suprarenal cortex.

When this cortex gets too active in a child before birth, it can cause a switch in sex. After birth sex cannot be altered, but this cortex possesses the power, if it becomes overactive, to affect personality at any period of life.

Automobile Accidents

Death Toll In United States Reaches Larger Figure

The Washington census bureau counted 1931's automobile death toll at 33,880, a fifteen per cent. gain over 1930 and "a new all-time high." It averaged the death-rate at 26.9 persons out of every 100,000. In 1933, the rate was 23.3. In 1934, in addition, 1,749 persons were killed in collisions between automobiles, rail-road trains and street cars.

After figures covering 86 major cities for the 52 weeks ended Sept. 28, had indicated the death rate was continuing upward in 1935.

"Ah, Mr. Perkins, I believe you have my nephew working at your office."

"Not to-day. It's the first ball game today, and he's gone to your funeral."

A municipal hotel where the poor can get a bed for the night for two coppers—less than one-half of a Canadian cent—has been opened at Hankow, China.

PREPARING TO SEARCH FOR THE GOLD OF THE SPANISH ARMADA

A fresh "gold rush" for the treasures of the sea-bottom has been started by a syndicate formed in Holland which hopes to raise billion valued by many millions of dollars from the ships of the Spanish Armada which are lying on the bottom of the sea in the Bay of Taborerny, Scotland. Here is a picture of a small model of a new giant salvage apparatus invented by the Dutch engineer, W. van Wiesen, which will be used during the salvage operations. This apparatus consists of a big tube giving entrance to a wide diving-bell which is illuminated and has communication by telephone with the staff above water.

World Distance Record

Use Specially Constructed Experimental Craft For Trip

A world distance record for seaplanes was claimed a short time ago by six United States navy flyers after a 3,387-mile non-stop flight from Panama in a newly designed ship.

The two-motored craft, commanded by the navy's distance flyer, Lieut. Commander Kneller McGinnis, glided to a landing at Alameda, Calif., at 2:21:15 p.m. (8:21:15 p.m. E.S.T.) 34 hours and 51 minutes from Panama.

Commander McGinnis said he believed the flight from Panama would better the airplane distance record held by Orrio Spofford, Italian flyer. Spofford's mark is 2,003 miles, made in a flight last July from Maffalona, Italy, to Berbera, British Somaliland.

To be considered a record, the mark must be better the Italian's record by 100 miles.

The seaplane is an experimental craft which utilizes new principles in design. It has pontoon which form wing tips while in flight and are dropped into landing position before it alights. This reduces wind resistance.

A whale-like tail is constructed to avoid damage in rough water landings. The body is below the wing and a navigator can sit in an open cockpit for observation.

Fixed Soil Work Money

Tokyo, Japan, has got an unexpected \$1,500,000 from the sale of soil being excavated for the foundations of the new city hall and the leveling of the site. It was originally intended to use the soil, which is very sandy, in a reclamation project east of the city, but the engineer of the Electric Bureau made the discovery that the soil is particularly suited for moulding purposes. There will be no trouble in disposing of it to engineering firms.

A cubic mile of water contains more than 1,100,000,000 gallons. And there are about 327,672,000 cubic miles of water in all the oceans of the world.

Heavy Voting

Record Number Of Ballots Marked At Polls

Canada's voters marked a record number of ballots on Oct. 14, it is disclosed by revised but still incomplete compilations by the Canadian Press of the voting by parties and provinces. With final reports still to come from many distant ridings, the survey showed that 4,022,567 of the 5,917,387 listed voters went to the polls.

Never before has the total Canadian vote topped the 4,000,000 mark. The previous record, set at the 1930 election, was 3,888,995. The proportions of the vote by parties were not materially changed from those shown in the first Canadian Press compilation the day after voting.

The incomplete major-party vote compared to that in 1930 follows:

Conservative	1,222,250	1,909,955
Liberal	1,877,460	1,714,500
C.C.F.	337,452	
Reconstruction	373,479	
Social Credit	137,493	
Others	74,093	274,180
Total	4,022,567	3,888,995

Monument To Bombing Planes

Erected In England To Commemorate Action Of Lord Londonderry

A monument, consisting of a stone model of an aerial torpedo mounted on a pedestal bearing the inscription: "To those who in 1932 upheld the divine right to use bombing planes" was unveiled recently at Woodford, England.

The promoters of the monument, among whom was the crumpling representative in Geneva "by whom" opposition the proposal to outlaw bombing planes was defeated.

R. H. Zaphiro, secretary of the Ethiopian legation, unveiled the monument.

Teacher: "It is possible to have a sentence without a verb?"
Son of a judge: "Yes, sir. 'Thirty days'."

Speedy Travel

Great Strides Made In Railways During Recent Years

There are days of great achievements in speedy travel. It is not long since the railways had an exhibition to demonstrate a century's progress since the first locomotive "piped" along at 12 to 15 miles per hour, to the amazement of all beholders.

But a museum of locomotive relics is increasing and two of the more recent examples from the Caledonian system—No. 23, the last single driving wheel express engine, and No. 103, the old Highland Railway engine which was the first of the 4-6-0 wheel arrangements now so general—are being withdrawn for preservation as relics in their original form at St. Helens Works.

Some of the more modern types will doubtless in turn become relics, as the new locomotive, "Silver Jubilee" to run between King's Cross and Newcastle, is to cover the distance at an average speed of over 67 m.p.h., which puts the 53.7 m.p.h. of the Flying Scotsman into the shade. This accelerated speed cannot be restricted to England, and one may foresee the day when Edinburgh will be brought within six hours of London.—Edinburgh Scotsman.

Valuable Parcel

Discovered By An Expert At A Loan Exhibition

Five rare pieces of Worcester porcelain, only "discovered" through the visit of an expert to Vancouver, have lain for years in the home of Henry A. Bulwer. The pieces, featuring a rare old design, stated to be unavailable even at the Royal Porcelain Works in Worcester, are worth more than \$600.

Of the practically unknown "father" pattern, the pieces were turned out by the famous factory at the time the shadow of Napoleon was falling across Europe. They were given to Bulwer's mother as a wedding present by his grandfather, and were never shown to the public until last spring when they were included in a loan exhibition of Worcester ware.

Two Clever Women Workers

One Specialized In Mine Lighting, The Other An Engineer

Miss Monica Maurice, a brunette, with the slender, sleekly groomed outline of the moment, beautiful composed features and smiling eyes is the modern "lady of the lamp."

As manager of a large lamp-making company she has for four years been responsible for the planning and operation of lamps at collieries in every large coalfield in England.

She does much of her work in the mines. This entails her driving an average of 25,000 miles a year.

She hopes to save much time in the future by flying, for she has just obtained her certificate. She is the first woman in Sheffield to do this.

One of her aims is to bring about an international standard for mine lighting.

To this end she has read many papers at international meetings of mining and illuminating engineers in France and Germany, her first when she was 21. She spoke the national tongue in each case, and took part in the technical discussions.

To prepare herself for her job, Miss Maurice studied at the Paris Sorbonne and Hamburg University, qualified as a shorthand writer and typist in three languages, visited coal mines of Westphalia, and worked in the shops of the world's largest mine lamp makers in Saxony.

She plays as hard as she works, and is an expert rider, swimmer and dancer. Her favorite recreation is when she calls "well-end aerobically."

Another remarkable woman is Miss Verena Holmes, a fully qualified mechanical, metallurgical, locomotive and civil engineer with several patents to her name.

One of these, the Holmes patent valve gear, is used in Diesel engines. Another is incorporated in all modern locomotives.

Her chief job is the testing out of new ideas for patents to insure their practicability. She is one of a handful of people qualified to do this highly specialized kind of work.

Super Traffic Policeman

Device Cuts Period Of Waiting On All Vehicles

A new wonder of traffic control has made its appearance in London, Eng. It is called an "integrator." It is a kind of super-traffic policeman, a little thing. It could be heard faintly, by ticking through its metal cover at Maybroke Circus.

It adds and subtracts the number of vehicles in its "area" although some of them are half a mile distant and hidden by tall buildings.

The "integrator" will shortly be installed, wherever useful, in different parts of London.

Here is what it did one day in Gloucester Pl., W.—a road much used by private cars avoiding Baker St. to reach Marble Arch from St. John's Wood. Lights are installed in Gloucester Pl. at the blind crossroads.

The "integrator" kept on counting the number of cars which passed the road, and gave them the main right of way. When one car only advanced, the "integrator" made no note of the fact, but allowed the main traffic a fairly long stop-free period by maintaining the lights at green.

When two or more cars wished to cross the main stream the "integrator" shortened the stop-free period by a few seconds.

Quickly the main stream was halted. And immediately the Gloucester Pl. traffic was liberated.

When there was a lull in the main stream the side road vehicles were given the "go" signal with a delay of not more than a second or so.

The "integrator" cuts down the period of waiting of all vehicles, side road or major road.

Trade With Russia

Montreal Manufacturers Would Ship Clothing To Soviets

Anxious to export large quantities of made-up goods to Soviet Russia, a group of men's clothing manufacturers in Montreal is prepared to form a special finance corporation to achieve that end and is in communication with Hon. T. D. Bouchard, provincial minister of municipal affairs, trade and commerce.

On behalf of the group, Ad. Joseph Schubert announced that should negotiations for resumption of full trade between Canada and the U.S.S.R. follow Mr. Bouchard's conference with the Soviet ambassador at the Washington, the clothing trade would like to be borne in mind.

One of the forerunners of the automobile and the motorcycle was a bicycle propelled by steam. It was built in 1885 and is now owned by a Philadelphia man.

U. S. Population

Prediction Is Made That It Will Increase After 1960

The New Dealers predict a static population for the United States by 1960.

After another quarter century, the population of the country will cease to grow, causing upheavals in the economy and personal aspects of the nation's resources, according to the National Resources Committee, a body created by President Roosevelt to "plan" the future of the country.

The committee based its conclusions on reports from various state planning boards.

The national committee made no attempt to estimate the total population of the country in 1960, but pointed out that with no further increase in the buying public, progress after 1960 will depend on raising living standards. Birth rates will cease their present decline and aged persons will fill places in industry now filled by youth, according to some of the committee's findings.

The New Dealers report that their studies indicate that following future developments, the U. S. population will be stabilized about 1960.

"That future population distribution will depend in large measure upon the development of the country's natural and industrial resources."

"That during the next 25 years, the proportion of the population employed in agriculture will be approximately doubled."

"That the number of young people under twenty years will decrease in about the same amount as that over 60 will increase."

"That occupational characteristics of the population will change, and that as the mechanization of agriculture and industry increases, opportunities for employment in such new fields as education, conservation, recreation and service occupations will increase."

Canadian Dressed Poultry

Large And Increasing Shipments Being Made To British Isles

There has been an exceptionally good market for Canadian dressed poultry in the British Isles this year. From January 1, to September 30, 1935, a total of 3,313,160 pounds of chickens, turkeys, fowls, ducks, and geese have been shipped from the Dominion, compared with a total of \$32,990 pounds for the corresponding nine months of 1934, and 4,375 pounds for the similar nine months in 1933.

Of this year's shipments, 1,689,750 pounds were chickens, 575,632 pounds were turkeys, 30,240 pounds of 47,000 pounds ducks and 2,500 pounds geese. The British Isles import annually about 4,500,000 pounds of poultry and, according to officials of the Poultry Services, Live Stock Branch, Dominion Department of Agriculture, the Dominion has never had a greater opportunity than at present to get a share of that market. As a result of the increased volume of poultry exports, Canadian prices have advanced to Canadian producers. If, however, Canada desires to continue to hold the British market, attention must be paid to producing milked A and B grades. The majority of poultry that has been exported has been Selected B and C grades, the two lowest commercial grades. Reports received by the Dominion Department of Agriculture from Great Britain would indicate very clearly that better than Selected B and C grades must be shipped if the market is to be held.

The production of milked birds is comparatively easy. All that is required is to crate fatten them from two to three weeks before killing on a ration of equal parts of ground oats, wheat, barley or buckwheat, mixed with boiled potatoes at the rate of about one-third of the volume of meal mixture and then mix with four mulls.

The greatest demand for chickens in the British Isles is for birds of four pounds and under when dressed.

Cross-Bred Wool

The wools of prime interest in international trade are merino and cross-bred. Canada, New Zealand, the British Isles, Iran, Free State, Argentina, Uruguay, Chile, and Brazil (which also grows merino) and Spain (which also produces carpet wool) are producers of cross-bred wool. Merino is the prevalent type of wool of Australia, Union of South Africa, and the Washington. The clothing trade is turned out by Soviet Russia, China, India, French Africa, Turkey, Iran, Syria, Peru, Bolivia, Mexico, and Ecuador.

A door-knob is a thing a revolving door goes round without

THE REMAINS OF THE NICHOLS PLANE AFTER THE CRASH

Wreckage of plane

Ruth Nichols

This twisted framework above is all that remains of the giant 22-passenger plane which crashed at Troy, N.Y., causing the death of Captain Henry Hubhult and serious injury to Miss Ruth Nichols, noted aviatrix. Four other passengers were slightly injured.

Do You Ever Wonder

Whether the "Pain" Remedy You Use is SAFE?

Ask Your Doctor and Find Out

Don't Entrust Your Own or Your Family's Well-Being to Unknown Preparations

THE person to ask whether the preparation you or your family are taking for the relief of headaches is SAFE, to use regularly in your family doctor. Ask him particularly about "ASPIRIN."

He will tell you that before the discovery of "Aspirin" most "pain" remedies were advised against by physicians as bad for the stomach and, often, for the heart. Which is food for thought if you seek quick, safe relief.

Scientists rate "Aspirin" among the fastest methods yet discovered for the relief of headaches and the pains of rheumatism, neuritis and neuralgia. And the experience of millions of users has proved it safe for the average person to use regularly. In your own interest remember this:

"Aspirin" Tablets are made in Canada. "Aspirin" is the registered trademark of the Bayer Company, Limited. Look for the name Bayer in the form of a cross on every tablet.

Demand and Get "ASPIRIN"

Toronto To Be Quiet

Toronto citizens have many ideas toward the elimination of noise that disturbs their sleep. Action proposed by citizens included rubber shoes for milkmen, rubber boots for milk trucks, rubberized wheels for street cars and a soft composition street car track.

India has a rural-uptilt campaign.

SETTLING QUARRELS WITH SALT

In far away Borneo, so great is the respect for Salt, that quarrels are settled by exchanging lumps of this precious substance vital to life itself. Wouldn't you like to read this and many other gripping facts in a new booklet for Children? "Salt all over the World." Quaint, suggestive, customs and stories! Stir the imagination! Educational! Free—send coupon now!

NEUROUS? Salt rules, while taking baths, are refreshing, restful for everyone.

Regal Table Salt. A Windsor Salt Product. Ask for it in its distinctive, mouth wash and gargle.

Christine Whiting Parmenter
Author of
"One Wild River To Cross"
"The Unknown Port," Etc.

SYNOPSIS

Nancy Nelson is a sub-boss, a gay, irresponsible girl of nineteen, with no care beyond the choice of her costume for her coming-out party. Suddenly, in the market crash, her indulgent father loses all he has, and big family is faced with the necessity of a simpler method of living. At this juncture a letter is received from an eccentric relative in Colorado, who offers the girl a home on what seems to be impossible conditions.

After much consideration Cousin Columbine's offer is accepted, and Nancy and Jack arrive at Pine Ridge. Nancy set out one afternoon to climb to the top of a hill so as to obtain a view of the surrounding landscape and misses the path Aurora Tabbs had told her to follow. A true comes along the road driven by Matthew Adams, and she asks him which way to go. They ascend the hill, look around, and then go on to Cousin Columbine's. There Matt Adams tells Nancy that his brother Jack Nelson has been hired to help out on the big game ranch. With Jack Adams, Nancy finds that she is in trouble, and having no books to read, the idea of starting a public library at Pine Ridge seems a good one, and Nancy writes home to get her parents to send her the books they are sure are all they could induce others to lend her.

Nancy's parents and friends give her liberal support to her request for books, and a sizeable box arrived in due time. Father Adams painted a sign for the library, and the Adams are overjoyed on the shelves for the books and decorations to make the library look presentable.

Jack Nelson, Matthew Adams, and Nancy go to the prairie home of Matt Adams for the ride, and after Nancy and Jack leave for home, they are caught in a blizzard. Blinded by the swirling snow they collide with a car full of school children, which was stalled across the road with its back wheels resting in a snow-drifted gully. Their car being wrecked, Jack and Nancy stay with the children and do their best to help them. The next morning Jack sets out for help in the blizzard. He succeeds in finding help, and the party of children and Nancy are rescued. As a result of the exposure Nancy's feet are badly frozen, and she seriously ill with pneumonia, but both of them recover.

Now Go On With The Story

CHAPTER XII—Continued

"The same, lady—or one branch of it anyway; and after last night's rain the brooks and rivers will be full. You'll lose your mind over the road ahead, Nancy."

Mark was right. They followed a mountain stream bordered by giant firs and quaking aspens. The mountains were greener here. "More friendly," observed Nancy. "More like New England." And after a short climb, lunch with the historic Platte rippling peacefully at their feet, Cousin Columbine told some of the old tales which never failed to stir her audience.

"When we get home," Jack proclaimed, "I'll tell you the story of my acquaintance with some mountain people. Nancy will bore all her friends with stories of pioneer days in Colorado, and storm the library for literature on the subject."

Father Adams looked up with a smile.

"In that case, I've a little book by a young Englishman which I'll present to you, Nancy. It's worth reading."

"You mean the fellow who landed at Vera Cruz, came up through Mexico and camped for a time at South Park—Bayou Salade, they called it there?" asked Matthew. "His father nodded, and went on: 'I still recall something one of our western poets wrote about him. It says:

"Alone through dusk he sat—
By Bayou Salade alone the
Platte,
Safe from the rumbling dust to
Santo Fe,
Cool in the crooked spruce that
Whispered—
While . . ."

John Adams paused, unable to remember further, and to the surprise of every one, Matthew, dreamy eyes watching the river, continued:

"'While good Panchoito browned
And glistened along the sage
Beyond the picket line, it was an
Age
Of picket fires,
Broiled bawls—tail was good
Better than dripping hump-steak,
—cedar wood
Was sweet in flapping, snapping,
crackling bright—
Alone, the boy, Bayou Salade,
And Night."

There followed a moment of appreciative silence as Matt ceased speaking. Then Luke associated with admiration: "Gee! brother how'd you ever remember that?"—while Nancy, realizing that with this honest praise Matthew's self-consciousness had returned again, tactfully drew attention away from him by asking:

"Did any of those old, old Spanish expeditions come this way?"
"I couldn't say, my dear," responded Cousin Columbine. "They may possibly have passed near Pine Ridge, though that, I believe, has not been proved."

And so no one dreamed that the girl who sat there, lost to the present in visions of other days, was to discover what looked nationistically like the missing proof.

CHAPTER XXIII

It was on the fourth of July when Jack announced at breakfast that with their departure only two days away, the time had come to tackle the sagging game posts.
"You can't put me off another hour," he insisted (when the old lady said: "Both those posts, Jack. Don't waste your strength on 'em!"). "I'm two pounds heavier than before the blizzard, Cousin Columbine, thanks to those hay days and Aurora's cooking; and those posts give me the heebie-jeebies. If there were time I'd paint the house for you too."

"You may have that to look forward to when you come again!" she responded, endeavoring to speak briskly. "I hope your father will consider John Adams's offer of a job for the winter, Jack, and send you back to us. As for Nancy, I don't dare think how still the house will seem without her. I felt like a lost soul the days you stayed at Prairie Ranch."

For the visit to "Uncle Tom's" was over—three days that had softened the mood of these men, which swept plain, leaving instead a vision of flower-dappled prairie.

"It was necessary for this stack of newspapers and letters," Nancy confessed the day she stowed them in her trunk, "that whole ghastly experience would seem to be done."

"A nightmare, I'd call it," corrected Aurora. "Victor Tuba says I lost a couple of shirts that blizzard, as for Miss Columbine, she'll never be the same woman again. It's my opinion that if Eve and John Adams hadn't took their lives in their hands and drove down here to keep her company, she'd have lost her mind!"

"And it's my opinion," retorted Miss Columbine, who had come in unobserved, "that you were in a lot more danger of losing yours! Don't talk nonsense, Aurora Tuba!"

Nancy laughed at the time, even though something told her that in a measure Aurora was right. One day told for hours like those, and Cousin Columbine had not escaped. The old lady made a shade less brisk, less energetic; and Nancy hated to think how lonely she would be when left with only Aurora Tuba for company.

"If I were twice, or could be in two places at once," she confided in General Grant as she undressed one night, "I would solve the difficulty. What's the use of being a great general, anyway, if you're incapable of advice to me, Ulysses S.?"

But if the General saw a solution of the problem, he kept it to himself; and the days passed with Cousin Columbine looking a bit grim, when she thought no one noticed, and Matthew Adams losing his appetite to an extent that alarmed his mother. And now tickets and reservations were ordered. Mary Taylor promised (with Luke's assistance) to watch over the Aladdin Library; and Nancy was conscious of a new sensation, something she described to herself as "a sinking feeling down inside," each time she caught a glimpse of the unmade quilt hovering mutely, hopelessly, in Matthew's expressive eyes.

Now is the Time For This Help in Preventing Colds

Formulas Especially Designed to Aid Nature's Defenses in Nose and Upper Throat. **VA-TRO-NOL COLD-SHIELD** PART OF COLD-CATCH PLAN

Don't wait for a cold to develop—or get you down. After all, in the early stages of colds, you need that first warning nasal irritation or sneeze—apply a few drops of Vicks Vapo-rinol. Used in time, Vapo-rinol helps prevent colds. Vapo-rinol is especially designed to gently stimulate the functions provided by Nature—in the nose—to prevent colds, and to throw off bad colds in the early stages. Where irritation has led to a clogged-up nose (a stuffy head cold or nasal catarrh) Vapo-rinol spreads through the nasal passages—relieves swollen membranes—clears spreading mucus—brings cooling relief.

For Fever and Shorter Colds. Note for your family: Vicks has developed, especially for home use, a practical Plan for Better Control of Colds. This consists of: 1. Use of Vapo-rinol to prevent and shorten colds. 2. Use of Vapo-rinol to prevent and shorten colds. 3. Use of Vapo-rinol to prevent and shorten colds. 4. Use of Vapo-rinol to prevent and shorten colds. 5. Use of Vapo-rinol to prevent and shorten colds. 6. Use of Vapo-rinol to prevent and shorten colds. 7. Use of Vapo-rinol to prevent and shorten colds. 8. Use of Vapo-rinol to prevent and shorten colds. 9. Use of Vapo-rinol to prevent and shorten colds. 10. Use of Vapo-rinol to prevent and shorten colds. 11. Use of Vapo-rinol to prevent and shorten colds. 12. Use of Vapo-rinol to prevent and shorten colds. 13. Use of Vapo-rinol to prevent and shorten colds. 14. Use of Vapo-rinol to prevent and shorten colds. 15. Use of Vapo-rinol to prevent and shorten colds. 16. Use of Vapo-rinol to prevent and shorten colds. 17. Use of Vapo-rinol to prevent and shorten colds. 18. Use of Vapo-rinol to prevent and shorten colds. 19. Use of Vapo-rinol to prevent and shorten colds. 20. Use of Vapo-rinol to prevent and shorten colds. 21. Use of Vapo-rinol to prevent and shorten colds. 22. Use of Vapo-rinol to prevent and shorten colds. 23. Use of Vapo-rinol to prevent and shorten colds. 24. Use of Vapo-rinol to prevent and shorten colds. 25. Use of Vapo-rinol to prevent and shorten colds. 26. Use of Vapo-rinol to prevent and shorten colds. 27. Use of Vapo-rinol to prevent and shorten colds. 28. Use of Vapo-rinol to prevent and shorten colds. 29. Use of Vapo-rinol to prevent and shorten colds. 30. Use of Vapo-rinol to prevent and shorten colds. 31. Use of Vapo-rinol to prevent and shorten colds. 32. Use of Vapo-rinol to prevent and shorten colds. 33. Use of Vapo-rinol to prevent and shorten colds. 34. Use of Vapo-rinol to prevent and shorten colds. 35. Use of Vapo-rinol to prevent and shorten colds. 36. Use of Vapo-rinol to prevent and shorten colds. 37. Use of Vapo-rinol to prevent and shorten colds. 38. Use of Vapo-rinol to prevent and shorten colds. 39. Use of Vapo-rinol to prevent and shorten colds. 40. Use of Vapo-rinol to prevent and shorten colds. 41. Use of Vapo-rinol to prevent and shorten colds. 42. Use of Vapo-rinol to prevent and shorten colds. 43. Use of Vapo-rinol to prevent and shorten colds. 44. Use of Vapo-rinol to prevent and shorten colds. 45. Use of Vapo-rinol to prevent and shorten colds. 46. THE CHRONICLE

The Very Best Medium in the District Advertising will gain new customers. Advertising will keep old customers. Advertising liberally always pays. Advertising makes success easy. Advertising builds confidence. Advertising shows energy. Advertising shows pluck. Advertise then, at once.

Hunters rarely see leopards because they are chiefly at night.

Business is like a wheelbarrow. It stands still unless someone pushes it.

A new rubber cement for tree wounds is said to retain its plasticity so that it does not crack nor shrink away as the tree grows.

YOU CANNOT produce business at the market nor move rabbits from a hat. It takes something more than magic to keep the wheels of industry turning today. The surest method is by constantly telling people what goods or services you sell and why they should buy them. Good printing plays an important part. Let us help you in both planning and execution.

Holmes like butter so much they can eat it by the pound.

In excavations at the tomb of King Zoser, an Egyptian monarch, who ruled about 3000 B.C., elaborate beer mugs were found.

Thos. J. Ramsay who has been taking treatments in Calgary for the past few weeks, returned home on Monday night and is looking somewhat better.

The Drumheller bus was routed through Carbon last Saturday owing to the highway between the Service Station and Delnaker being blocked.

Wilfred Poxon Jr. who is attending the University at Alberta, spent the week end at the home of Mr. and Mrs. J. C. Reed.

VILLAGE OF CARBON

Notice is hereby given that, under the provisions of The Tax Recovery Act, 1929, the Village of Carbon will offer for sale, by public auction, on Friday, the 29th day of November, 1935, at 2 o'clock in the afternoon at the office of the Secretary-Treasurer, Carbon, Alberta, the following lands:

GOVERNMENT EMPLOYEES
CAN'T SMOKE, OFFICE HOURS

EDMONTON—Smoking by provincial government employees in office hours is banned under an order issued by the Social Credit government. The order which applies to all workers in the legislative buildings, also prohibits loitering in corridors or washrooms while employees must remain at their work until the quitting bell rings.

Officials point out that an order-in-council passed in 1929 imposed a ban on smoking and laid down certain other regulations governing the conduct of employees, but that it has not been generally observed.
